

Our Ethernet services rock, but don't take our word for it

December 15, 2022

Ethernet services are critical for businesses. Ask any of them and they'll tell you it's true. Lumen knows there are many Ethernet providers out there, so we recently invested in an upgraded high-bandwidth Ethernet architecture. Using our vast, diverse network, we are now offering one of the best Ethernet product portfolios in the industry.

But don't take our word for it – experts at a leading research analyst firm agree our Ethernet services rock, so much so, they awarded us for it.

[Continue Reading](#)

*“Enterprises typically use Ethernet services to address the high bandwidth demand. Lumen offers an extensive and comprehensive networking portfolio that can provide the solution that best suits connectivity needs at different locations. Lumen’s extensive global network and expanded metro and long-haul footprint in the United States are major differentiators. With its strong overall performance, Lumen earns **Frost & Sullivan’s 2022 United States Market***

Leadership Award in the business carrier Ethernet services industry.”

At Lumen, we don't take this recognition lightly. Frost & Sullivan applies a rigorous analytical process to evaluate multiple nominees for each award category. Their Leadership Award recognizes the company that achieved the greatest market share resulting from outstanding performance, products, and services. Lumen excelled in many of the criteria in the business carrier Ethernet services space.

We don't need to tell you bandwidth-hungry business apps, and cloud and data center connections continue to drive demand for Ethernet services. Everyone is talking about it. However, we can tell you more about how we connect headquarters with office branches, data centers, cloud locations – basically, any location in the world using multiple Ethernet connections. To learn more, read this [report](#).
