

Four Ways to Get the Most Out of Your In-Home Wi-Fi

With so many of us working from home, it's important to make sure your network service is operating at maximum capacity. Below are a few tips that can help you get the most out of your wi-fi connectivity:

- **Check your devices** - Most in-home wireless broadband connections have speed limitations and can be impacted by the devices customers are using to enable the wireless service. We encourage customers to make sure all devices being used with your in-home Wi-Fi have the same technology as their modem for optimum results.
- **Limit interference** - Customers should also be aware that some devices can cause interference with the wireless signal in the home, including wireless keyboards, cordless phones, microwaves, and Bluetooth headsets.
- **Rethink where you keep your router** - Where you locate your router will also have an impact on service speeds. It's best to place the router in the area of the home where wireless will be used most.
- **If you still need help, ask** - If customers are experiencing slow Internet speeds in the home, we encourage them to access online Internet help pages to troubleshoot the situation and for more information about getting the most out of their Internet speeds.

CenturyLink services and features are not available everywhere and speeds may vary. Contact a CenturyLink Connected Communities Expert for details at connected.communities@centurylink.com.
